

KEMETA SA is a representative in Greece for the Spanish company SVE Corp.

The Spanish company SVE Corp. specializes in the manufacturing of certified panels for fire fighting pumping units, controllers for generating sets and automatic battery chargers.

CONTROL AND AUTOMATION PANELS FOR FIRE EXTINGUISHING COMPLEXES ACCORDING TO EN12845

The SCF840-D-U and SCF8-E controllers are high specification, automatic and configurable instruments, useful for managing the operations of any Diesel Fire Pumps or electric motor of any power in any environment.

They control the initiation of fire pumps and protect them through the action of connected alarms and alarms generated by the controller, visualize the most relevant values and information, also manage communication with the operator and the remote manned center.

Color screen. Digital and analog adjustable functions.

Communications: Wifi USB, ETHERNET, RS485.

Embedded website. Logs: 12,000 Pressures, 1,200 Events, 50 Pump Tests.

CONTROLLERS FOR GENERATING SETS

The SAM825k-AMF controllers are high-performance, complete, automatic and configurable instruments useful for controlling generator sets in emergency automatic mains failure (AMF) installations.

The SAM825k-AMF controllers automatically start and stop generator sets, protect them through connected alarms and controller-generated alarms, and display the most relevant values. They carry out the general coordination of the operation and switching of consumers from the Mains to the Generator and vice versa.

AUTOMATIC BATTERY CHARGERS

The battery charger, SBB12070 is specially designed for emergency generators and diesel engine fire pump starter batteries. Permanently connected to the battery, it constantly monitors the condition of the batteries and always keeps them at maximum capacity. The SBB12070 battery chargers remain on during the engine starting process.
